

## **Project Design Phase-II**

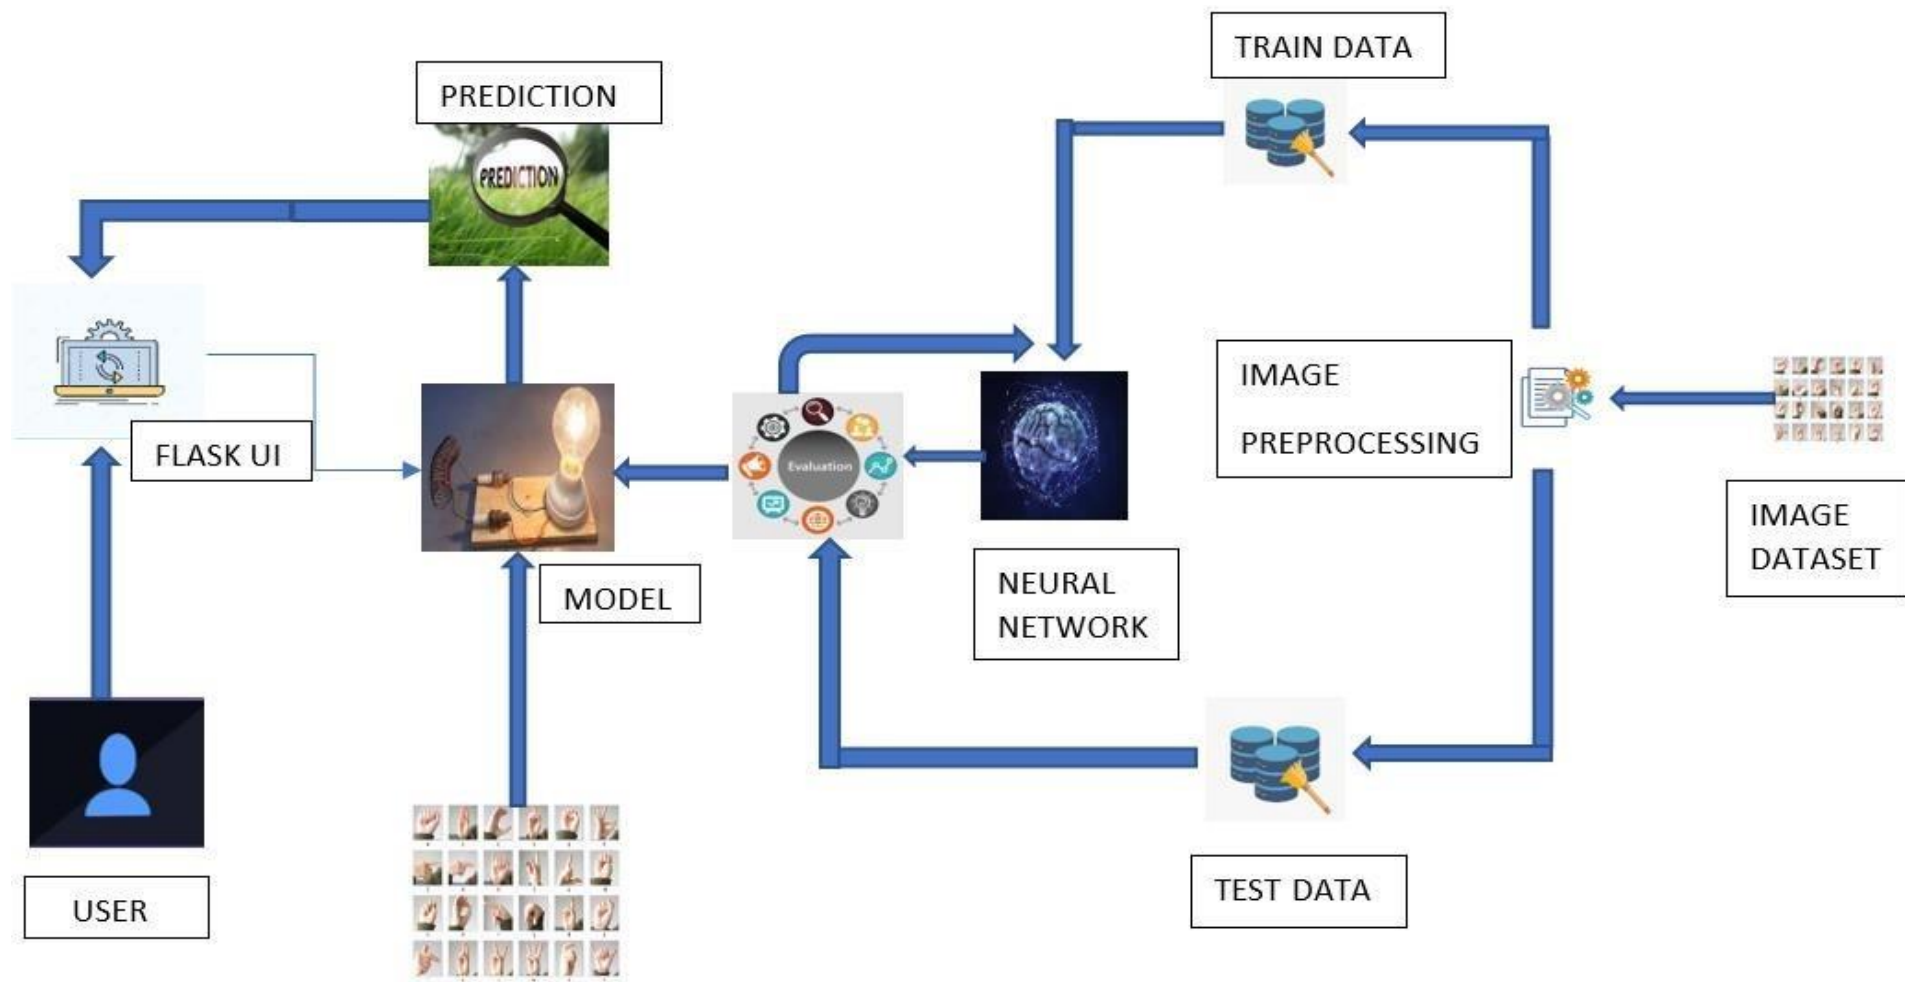

### **Technology Stack (Architecture & Stack)**

|               |  |
|---------------|--|
| Date          | 03 October 2022  |
| Team ID       | PNT2022TMID30540   |
| Project Name  | Real- Time Communication System Powered by AI<br>For Specially Abled |
| Maximum Marks | 4 Marks  |

#### **Technical Architecture:**

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

**Example: Real Time Communication System Powered by AI for Specially Abled for online mode**

**Table-1: Components & Technologies:**

| <b>S.No</b> | <b>Component</b>       | <b>Description</b>   | <b>Technology</b>   |
|-------------|------------------------|--|---|
| 1.          | User Interface         | How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.  | HTML, CSS, JavaScript / Angular Js / React Js etc.              |
| 2.          | Application Logic-1    | It deals with variety of frameworks, libraries and supports required to develop the project  | Java / Python   |
| 3.          | Application Logic-2    | Helps in converting human voice into written words, In simple it is used to convert speech to text.  | IBM Watson STT service  |
| 4.          | Application Logic-3    | Provides fast, consistent and accurate answers during the execution phase of the project   | IBM Watson Assistant  |
| 5.          | Database               | It can be numerical, categorical or time-series data   | MySQL, NoSQL, etc.  |
| 6.          | Cloud Database         | Enables the user to use host database without buying the additional hardware   | IBM DB2, IBM Cloud ant etc.                                     |
| 7.          | File Storage           | File storage should be highly flexible, scalable and effective   | IBM Block Storage or Other Storage Service or Local File system |
| 8.          | External API-1         | Used to access the information in the cloud  | IBM Weather API, etc.   |
| 9.          | External API-2         | Used to access the information for data driven decision making   | Aadhar API, etc.  |
| 10.         | Machine Learning Model | Machine learning considered an application that used to increase computer ability. It can be defined as an algorithm that focuses on computer program development. | Real time communication using AI for specially abled            |

|     |                                 |   |  |
|-----|---------------------------------|---|--|
| 11. | Infrastructure (Server / Cloud) | Application Deployment on Local System / Cloud Local<br>Server Configuration:<br>Install the windows version and execute the installer. Select APACHE to install web server | Local, Cloud Foundry, Kubernetes, etc. |
|-----|---------------------------------|---|--|

**Table-2: Application Characteristics:**

| S.No | Characteristics          | Description   | Technology  |
|------|--------------------------|---|---|
| 1.   | Open-Source Frameworks   | The frameworks used are   | TensorFlow,PyTorch,Scikit-learn,XGBoost, Apache MXNet.                              |
| 2.   | Security Implementations | the security / access controls implemented, use of firewalls etc.   | Identify, Prevent and Respond   |
| 3.   | Scalable Architecture    | the scalability of architecture (3 – tier, Micro- services)   | Data , models, operate at size, speed and complexity                                |
| 4.   | Availability             | the availability of application (e.g. use of load balancers, distributed servers etc.)                                    | Image and facial recognition, lip reading, text summarization, real time captioning |
| 5.   | Performance              | Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's) etc. | Full and effective participation , equality of opportunity, accessibility           |
